

Sujan Sapkota

Computer Engineering Graduate

Cloud Infrastructure | Networking | Information Systems

+977 9867970707 · Chitwan, Nepal · sujansapkota0923@gmail.com

SUMMARY

Computer Engineering graduate with practical experience in network administration, cloud infrastructure, SecOps, and enterprise IT operations. Proven technical background through hands-on roles as a Cloud & Infrastructure Engineer and Network Trainee at Kontract IT Support, complemented by network support training at Nepal Telecom and a DevOps & SecOps fellowship at Leapfrog Technology. Skilled in managing AWS multi-region environments, Docker/Kubernetes containerization, Terraform IaC, and zero-trust network security.

EDUCATION

Bachelor of Engineering in Computer Engineering **April 2021 - June 2025**
Kathmandu Engineering College (KEC), Tribhuvan University, Kathmandu

Higher Secondary Education — Science **Jul 2018 – May 2020**
Trinity International College and Higher Secondary School, Kathmandu

Secondary Education (SEE) **Mar 2008 – Apr 2018**
New Oasis Academy Higher Secondary School, Baglung

TECHNICAL SKILLS

System Administration	Linux Administration, Windows Administration, User Management, Access Control, Process Monitoring, System Troubleshooting
Networking	TCP/IP, VLANs, Routing, Switching, Subnetting, DHCP, DNS, Cisco Packet Tracer, Network Troubleshooting
Infrastructure & Virtualization	Docker, Containerization, Virtual Machines, Load Balancing, Infrastructure Monitoring
Cybersecurity	Vulnerability Assessment, Security Monitoring, Information Gathering, Burp Suite, Wireshark, Access Control, Security Best Practices
Cloud & DevOps	AWS, GitHub Actions, CI/CD Pipelines, Automation, Terraform, Kubernetes, Infrastructure Deployment
Databases & Storage	SQL, Redis, Database Administration, Backup and Recovery Concepts
Programming	Python, C, C++, Bash Scripting
Tools	Git, GitHub, Postman, Linux CLI, Monitoring Tools
Operating Systems	Linux, Windows, macOS
Soft Skills	Technical Support, Incident Response, Problem Solving, Documentation, Communication, Team Leadership

EXPERIENCE

Kontract IT Support [Certificate] *Cloud & Infrastructure Engineer*
February 2026 – Present

- Provision, configure, and maintain hybrid enterprise infrastructure utilizing Linux/Windows servers and AWS cloud environments (VPC, EC2, RDS, S3).
- Automate multi-environment infrastructure deployment using Infrastructure as Code (Terraform) and setup CI/CD delivery pipelines with GitHub Actions.
- Manage containerized workload deployments, orchestration, and service networking using Docker and Ku-

bernetes clusters.

- Enforce network security using site-to-site IPsec VPNs, subnets, custom routing, security groups, and AWS Web Application Firewall (WAF).
- Monitor system health, centralize logs, and implement automated threat alerts using AWS CloudWatch, GuardDuty, and Security Hub.

Kontract IT Support [Certificate]

Network & Systems Trainee

November 2025 – January 2026

- Assisted senior infrastructure engineers in managing local office network hardware, routers, switches, VLANs, and firewall policies.
- Configured web and database servers on Linux environments, including Nginx reverse proxy configuration, SSL setup, and DNS management.
- Handled user access control, IAM policies, and system administration under direct supervision following organizational security practices.
- Conducted routine network monitoring, system health checks, and maintained comprehensive infrastructure technical documentation.
- Gained hands-on exposure to cloud onboarding, subnetting, and foundational security auditing practices.

Leapfrog Technology [Certificate]

DevOps & SecOps Fellow

10-Week Fellowship

- Completed hands-on training in DevOps, cloud infrastructure, Linux systems, and security operations.
- Worked with containerized environments and deployment workflows using Docker and CI/CD pipelines.
- Performed security assessments, reconnaissance, vulnerability identification, and infrastructure hardening exercises.
- Monitored system performance and analyzed logs to identify operational and security-related issues.
- Gained practical exposure to cloud-native infrastructure and operational best practices.

Nepal Telecom [Certificate]

IT Intern — ISSD

11-Week Internship

- Assisted engineers in network monitoring, troubleshooting, and system maintenance activities.
- Observed operation of enterprise-scale networking and telecommunication infrastructure.
- Supported hardware and software troubleshooting tasks within the department.
- Participated in routine maintenance and operational activities to ensure service reliability.
- Gained practical exposure to enterprise IT support workflows and infrastructure management.

Intel Institute — INTEL afterSEE [Certificate]

Website Administrator

May 2024 – July 2024

- Managed and maintained institutional web services and digital resources.
- Administered Moodle-based online examination and learning management systems.
- Provided technical support to staff and students for platform-related issues.
- Assisted in maintaining service availability and user access management.

PERSONAL PROJECTS

Nepashray — Django Social Platform Backend [GitHub]

- Developed secure user authentication with login and email-based password recovery.
- Built dynamic dashboards for monitoring likes/comments, managing posts, and an admin panel for post verification.

URL Shortener [GitHub]

- Built a URL shortening service with customizable slugs, Base64-generated keys, and automatic expiry

support.

- Implemented high-performance storage using Redis and tracked detailed click analytics for each shortened link.

Hotel Booking Cancellation Prediction

- Trained a machine learning classification model to predict booking cancellations using data preprocessing and feature engineering.
- Performed exploratory data analysis (EDA) and data visualization to identify key cancellation drivers.

CERTIFICATIONS

- **Google Foundations of Cybersecurity** — Coursera, 2023 [Certificate]

ACHIEVEMENTS

- **President, KEC IT Club (2024/25)** [Link]: Led organization of workshops and bootcamps covering Web3.0, GitHub, Data Manipulation (NumPy, Pandas), Linux, and Open Source Contribution.
- **1st Place, WISE BEE Hackathon (2023)** [Link]: Won by developing a Hotel Booking Cancellation EDA and Prediction model.
- **KIST HackFest 2024 — 48-Hour Hackathon** [Link]: Built a computer vision web application for exercise pose analysis, rep counting, feedback, and gamified leaderboards.
- **PALS “Think Create Engineer” Program (2023)** [Link]: Residential program at IIT Madras, India; developed an Airport Passenger Feedback System as a final project.
